

As part of our expansion program, we are looking to recruit a trainee SMT machine operator

Ideal candidates will have a keen interest in engineering and a willingness to learn and develop new skills.

Based at our Letchworth facility, training will include the following:

- Setting up and operating surface mount pick and place machines.
- Setting up and operation of automatic stencil printers.
- Setup and operation of mass reflow ovens
- Manual component placement and inspection.
- Electronic component identification.
- Routine machine maintenance.
- Detailed quality inspection of populated circuit boards.

In addition, you will learn how to understand engineering principles, drawings and documentation, understand and improve production processes and get involved with research and development projects.

You will receive training from some of the best technicians in the industry and an opportunity to progress through to senior roles in a highly successful business.

Formal qualifications are not an absolute necessity, however engineering based degree, City & Guilds or NVQ would be an advantage.

If you would like to discuss the role in more detail, please get in touch via the details below.
